

## **ANALYTICAL DEVELOPMENT CHEMIST**

**Based in Kempston  
Fixed Term Contract  
Full Time**

An opportunity has arisen to join the Analytical Development Team within the Pharmaceutical Development and Support department.

Your role as an Analytical Development Chemist will involve the development and early stage validation of new and existing methods in accordance with current GxP guidelines, for various analyte and product types, using analytical techniques such as HPLC, GC, TLC and titration. The role will involve the writing of protocols, reports and SOPs. There will also be an element of equipment troubleshooting and maintenance required.

Other duties and responsibilities include:

- Transfer and training of validated methodology to other analytical areas
- Work independently and within a team to research and develop new methods where required
- Liaise with the Formulation department and regularly communicate progress directly and during meetings
- Identify and implement new technologies to improve analytical processes within the laboratory
- Performing general laboratory work and duties

To apply for the role of Analytical Development Chemist, you will need to have the following:

- Ideally have experience in developing and validating analytical methods, with a good, practical knowledge of HPLC and/or GC analytical methods, preferably in a pharmaceutical environment
- A degree (or equivalent) in a chemistry-based discipline
- Ability to use computer software packages, such as chromatography data systems, LIMS and Excel, for the collection, processing and reporting of data
- Experience in the techniques of TLC and titrimetric analysis and experience of equipment troubleshooting and maintenance would be beneficial
